

COLLABORATION, EXCELLENCE & CONTINUOUS LEARNING.

Work report

WIPRO TECHNOLOGY LTD.

Harshad Patil | It Administration & desktop eng. | 01 jul - 01 oct 2026

My role

IT ADMINISTRATION & DESKTOP SUPPORT

- **Employee Information**
 - **Employee Name:** Harshad Patil
 - **Employee ID:** [HA40193318]
 - **Company Name:** [Wipro Technology ltd.]
 - **Company Address:** [Wipro Technology ltd. Hinjawadi Phase 2,Pune]
 - **Role:** IT Administration & desktop Support.
 - **Duration:** 3 Months [01-07-2026 to 01-10-2026]
- **Role Summary**
 - Worked in IT Administration and Application Support,sql & my sql use for troubleshooting and data fetching data , focusing on application monitoring, incident management, user support, troubleshooting, database support, and basic system administration.
- **Key Responsibilities**
 - Monitor applications, servers, and system.
 - services Analyze and resolve application-related issues.
 - Handle user incidents and service requests.
 - Laptop Configuration & os installation.
 - Perform basic SQL queries for database troubleshooting.
 - Troubleshoot login, connectivity, and application errors.
 - Support user access and account-related requests.
 - Perform basic Windows/Linux administration tasks.
 - Follow incident, change, and escalation procedures.
 - Prepare incident reports and support documentation.
 - Maintain troubleshooting guides and knowledge-base documents.
 - Slove Bitlocker issue.

- **Skills Used**
- **IT Support | Application Support | SQL | MySQL | Windows | Linux | Networking Basics | Incident Management | Troubleshooting | MFA | Bitlocker | Service Desk**
- **Objective**
- To develop practical experience in IT Administration and Application Support by understanding real-world troubleshooting, incident handling, system monitoring, database support, and service management processes.

1. STEPS OF LAPTOP CONFIGURATING & OS INSTALLATION.

Asset received → Asset/IT team → Autopilot/Intune setup → User setup → Validation → Handover

After receiving the asset

1. **Receive the asset**
 - Check laptop, charger, bag, etc.
 - Verify asset tag/serial number.
2. **Follow the IT/Asset Management team instructions**
 - Confirm the asset is assigned to you.
 - Record the asset details in the required system.
3. **Check Windows Autopilot status**
 - Device should be registered in the organization's Autopilot/Intune environment.
 - Don't manually change corporate configuration unless instructed.
4. **Connect to Internet**
 - Start the Windows 11 device.
 - Connect to the approved network.
5. **Follow Windows Autopilot OOB**

- Select region/keyboard.
- Sign in with your organization's account.
- Allow organizational policies to apply.

6. Intune enrollment & configuration

- Device receives company policies.
- Required applications and security settings are installed.

7. Validation

- Check login
- Applications
- Windows updates
- Security/antivirus
- Network
- Intune/management status

8. Report completion

- Update the asset/ticket as required.
- Inform the responsible IT/Service Desk team if everything is completed

2. Reimage laptop

Why do we reimage a laptop?

Common reasons:

-  **OS corruption** or serious Windows errors
-  Suspected malware/security issue
-  Preparing a laptop for a **new employee**
-  Employee has left and the asset is being reassigned

-  Major configuration/software problems
-  Moving the device to a different corporate environment
-  Removing the previous user's data and configuration
-  Standardizing the device with the company's approved image

General process

Ticket / Reimage Request

Verify Asset Details

Confirm Approval & Backup Requirement

Check Device Eligibility

Prepare / Connect Device

Start Approved Reimage Process

Install Windows 11 Corporate Image

Autopilot / Intune Enrollment

Apply Company Policies

Install Required Applications

Windows Updates & Security

Testing & Validation

Update Ticket

Handover

Step-by-step

1. Receive the request

- Check the Service Desk/ticket request.
- Verify the reason for reimaging.
- Confirm the required approval.

2. Verify the asset

- Check asset tag.
- Verify serial number/device name.
- Confirm the correct user/assignment.

3. Check backup

- Confirm whether the user's required data has been backed up according to company policy.
- **Do not erase the device until backup/data-retention requirements are confirmed.**

4. Start the approved reimage method

Depending on the organization's environment, IT may use:

- Microsoft Intune/Windows Autopilot
- Configuration Manager (SCCM/MECM)
- Approved corporate imaging/recovery media

5. Install Windows 11

- Apply the organization's approved Windows image/configuration.
- Device starts with a clean corporate setup.

6. Autopilot/Intune setup

- Connect to the Internet.
- Complete Windows OOBE.
- Device enrolls into the organization's management platform.
- Company policies are applied.

7. Install applications

Examples:

- Microsoft 365
- Microsoft Teams
- Approved browser
- VPN
- Security/endpoint protection
- Business applications

8. Apply security configuration

Verify required:

- Security policies
- Encryption
- Antivirus/endpoint protection
- Windows updates
- Device compliance

9. Test the laptop

Check:

- Login
- Internet
- Wi-Fi
- Required applications
- VPN
- Printing/peripherals if applicable
- Corporate resources
- Device management/compliance

10. Close the ticket

Document:

- Reimage completed
- Date/time
- Asset ID
- Validation results

3. BitLocker issue

Why does a BitLocker issue happen?

Common situations:

-  **BitLocker Recovery screen appears** after a BIOS/UEFI or hardware change.
-  TPM/security configuration changes.
-  BIOS or firmware update causes recovery.

- ⚙️ Boot configuration changes.
- 🔑 User cannot access the required **BitLocker Recovery Key**.
- 🛡️ Intune/security policy requires BitLocker but encryption isn't configured correctly.

u

Open Command Prompt/PowerShell with appropriate authorization:

```
</> PowerShell
manage-bde -status
```

This shows BitLocker protection/encryption status.

You can also check:

```
</> PowerShell
Get-BitLockerVolume
```

4. Setup error of device setup error

setup screen:

Manual process

. Open Command Prompt

At the Windows Autopilot Press **ctrl + r**

The screenshot shows a dark-themed interface with a 'Share' button in the top right corner. It contains three main sections, each with a title and a code block containing a registry path:

- From CMD:** A code block containing the commands `</> cmd` and `regedit`.
- For Autopilot diagnostic information, inspect:** A code block showing the registry path: `HKEY_LOCAL_MACHINE` → `SOFTWARE` → `Microsoft` → `Windows` → `Autopilot`.
- Also inspect:** A code block showing the registry path: `HKEY_LOCAL_MACHINE` → `SOFTWARE` → `Microsoft` → `Provisioning` → `Diagnostics`.

Below the 'Also inspect' section, there is a downward arrow icon and the text: 'For Enrollment Status Page troubleshooting, you may also see enrollment-tracking information under:'. This is followed by a fourth code block showing the registry path: `HKEY_LOCAL_MACHINE` → `SOFTWARE` → `Microsoft` → `Windows` → `Autopilot`.

5 Account setup error

1. Open Command Prompt

At the Windows Autopilot setup screen:

Press Shift + F10

Command Prompt opens.

2. Check network

```
ipconfig /all
```

Test connectivity:

```
ping 8.8.8.8
```

Test DNS:

```
nslookup login.microsoftonline.com
```

3. Check Windows/Device information

hostname

systeminfo

Check Azure/Entra registration:

dsregcmd /status

Look at:

AzureAdJoined

DomainJoined

WorkplaceJoined

4 Press Shift + F10

or win + r

start ms-settings:

open setting and set a pin and finger

and try again

nor slove then also update complete manually

6 some useful commnds

Sure — 3-column bordered chart with short commands:

Purpose	CMD Command	Purpose	CMD Command	Purpose	CMD Command
File Explorer	explorer	Settings	start ms-settings:	Control Panel	control

Purpose	CMD Command	Purpose	CMD Command	Purpose	CMD Command
This PC	shell:MyComputerFolder	Task Manager	taskmgr	Device Manager	devmgmt.msc
Disk Management	diskmgmt.msc	Services	services.msc	Event Viewer	eventvwr.msc
Computer Mgmt	compmgmt.msc	Registry	regedit	System Info	msinfo32
Windows Version	winver	System Config	msconfig	PowerShell	powershell
Terminal	wt	Network	ncpa.cpl	Firewall	wf.msc
Sound	mmsys.cpl	System Properties	sysdm.cpl	Printers	control printers
User Accounts	netplwiz	Task Scheduler	taskschd.msc	Remote Desktop	mstsc
Disk Cleanup	cleanmgr	BitLocker	manage-bde -status	Security	start windowsdefender :
Windows Update	start ms-settings:windowsupdate	Display	start ms-settings:display	Bluetooth	start ms-settings:bluetooth
Wi-Fi	start ms-settings:network-wifi	Accounts	start ms-settings:accounts	Apps	start ms-settings:appsfeatures

Purpose	CMD Command	Purpose	CMD Command	Purpose	CMD Command
Recovery	start ms-settings:recovery	About PC	start ms-settings:about	IP Details	ipconfig /all
Ping	ping google.com	DNS Clear	ipconfig /flushdns	Network Reset	netsh winsock reset
Processes	tasklist	Kill Process	taskkill /IM app.exe /F	Check Disk	chkdsk
SFC Repair	sfc /scannow	DISM Repair	DISM /Online /Cleanup-Image /RestoreHealth	Current User	whoami
Computer Name	hostname	Restart	shutdown /r /t 0	Shutdown	shutdown /s /t 0

7 client talking & handling

1. **Listen** – Understand the client’s issue carefully.
2. **Ask Questions** – Collect required details.
3. **Stay Calm** – Communicate politely and professionally.
4. **Troubleshoot** – Identify the root cause.
5. **Provide Solution** – Explain the solution clearly.
6. **Update Client** – Keep the client informed about progress.
7. **Confirm & Close** – Confirm the issue is resolved and close the ticket.

8. Outlook, Teams, Prisma & Citrix – Setup Process

Application / Step	Short Process
Outlook	Download → Install → Sign in with company ID → MFA
Teams	Download → Install → Sign in → MFA → Test call/chat
Prisma	Download → Install → Sign in → MFA → Connect VPN
Citrix	Download → Install → Enter workspace URL → Sign in → MFA
Authenticator	Install Microsoft Authenticator → Add work account → Scan QR → Verify
MFA Setup	Enter company ID → Password → Approve Authenticator/OTP → Complete
Authentication	Verify user ID → Password → MFA → Access application
Final Check	Test Outlook/Teams → Test VPN → Test Citrix → Confirm access

9. Hardware Issue Handling – IT Administration

Step	Short Process
1. Identify Issue	Check laptop hardware/problem
2. Basic Check	Check charger, battery, display, keyboard, ports
3. Run Diagnostics	Run hardware diagnostic test

Step	Short Process
4. Record Details	Note asset tag, serial no. & issue
5. Create Ticket	Log hardware issue in ticketing system
6. Vendor Assignment	Assign/send ticket to the specific laptop vendor
7. Follow-up & Close	Track repair → verify laptop → update ticket & close

10. Optum Windows & Mac – PD, Setup & Temporary Laptop

Task	Short Process
Windows PD	Receive device → Check hardware → Perform PD → Windows setup
Mac PD	Receive Mac → Check hardware → Perform PD → macOS setup
Device Setup	Join required management → Install apps → Configure security
User Setup	Create/verify account → MFA → Outlook/Teams → Test access
Temporary Laptop	Check availability → Assign temporary laptop → Configure user access
Data/Access	Verify required applications, VPN and user permissions
Final Handover	Test device → Record asset details → Hand over to user

11. SQL & MySQL – Work Description

SQL (Structured Query Language) is used to store, manage, retrieve, and manipulate data in relational databases. MySQL is a popular relational database management system that uses SQL to manage structured data.

Where is it Used?

SQL/MySQL is used in applications, websites, business systems, and IT environments to manage employee, customer, product, transaction, and other organizational data.

Why is it Used?

SQL helps users efficiently store and retrieve data, filter information, generate reports, maintain relationships between tables, and perform data analysis.

My SQL/MySQL Work

I practiced MySQL database management by creating databases and tables and working with records. I used commands such as CREATE DATABASE, USE, CREATE TABLE, INSERT, SELECT, UPDATE, and DELETE.

I also practiced WHERE for filtering data, ORDER BY for sorting, GROUP BY for grouping, and aggregate functions such as COUNT(), SUM(), AVG(), MIN(), and MAX().

I worked with primary keys, foreign keys, constraints, ALTER TABLE, and different types of JOIN operations to combine data from multiple tables. I also practiced basic database structure checking using SHOW DATABASES, SHOW TABLES, and DESC.

This practice helped me understand database management, data retrieval, data manipulation, and basic SQL query writing.

12 Conclusion & Improvements

Conclusion

This work documentation summarizes my practical learning and experience in IT Administration, Windows 11 device support, application setup, troubleshooting, client handling, hardware support, and SQL/MySQL fundamentals. It helped me understand real-world IT support processes and improve my technical knowledge.

My Improvements

During this learning period, I improved my:

- **Technical Skills:** Windows 11, Autopilot, BitLocker, device setup and troubleshooting.
- **Application Skills:** Outlook, Teams, Prisma, Citrix, MFA and authentication setup.
- **Troubleshooting:** Identifying issues, finding root causes and applying appropriate solutions.
- **Communication:** Client interaction, issue understanding and professional communication.
- **Ticket Handling:** Recording issues, updating tickets and following the resolution process.
- **Hardware Support:** Basic hardware checks and vendor coordination.
- **Database Skills:** SQL/MySQL queries, database management, CRUD operations, joins and data analysis.
- **Professional Skills:** Time management, teamwork, documentation and problem-solving.

Future Improvement

I plan to improve my knowledge of Windows administration, networking, cloud technologies, automation, advanced SQL, PowerShell, and enterprise IT support tools.

Final Note

This documentation represents my learning journey and practical understanding of IT Administration and SQL/MySQL. I will continue learning new technologies and improving my technical and professional skills.

Thank You
